▣ Phase 4 Validation Method

◆ Selection of Validation Method

- ◊ Validation method: Leave-One-Out Cross Validation method was selected.

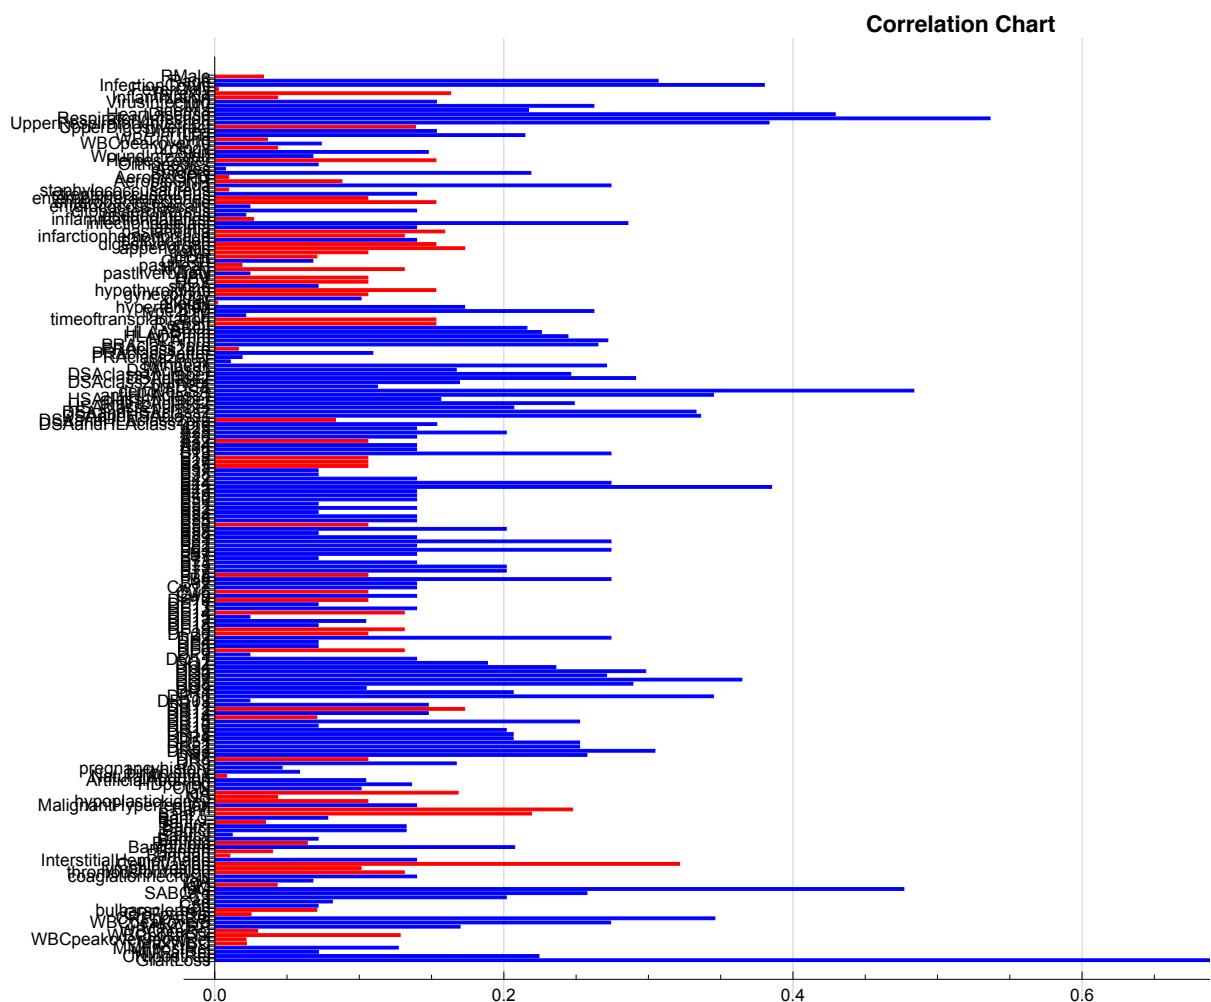

□ Phase 12 Leave-One-Out cross validation

- The LEAVE-ONE-OUT Cross-Validation method was chosen.

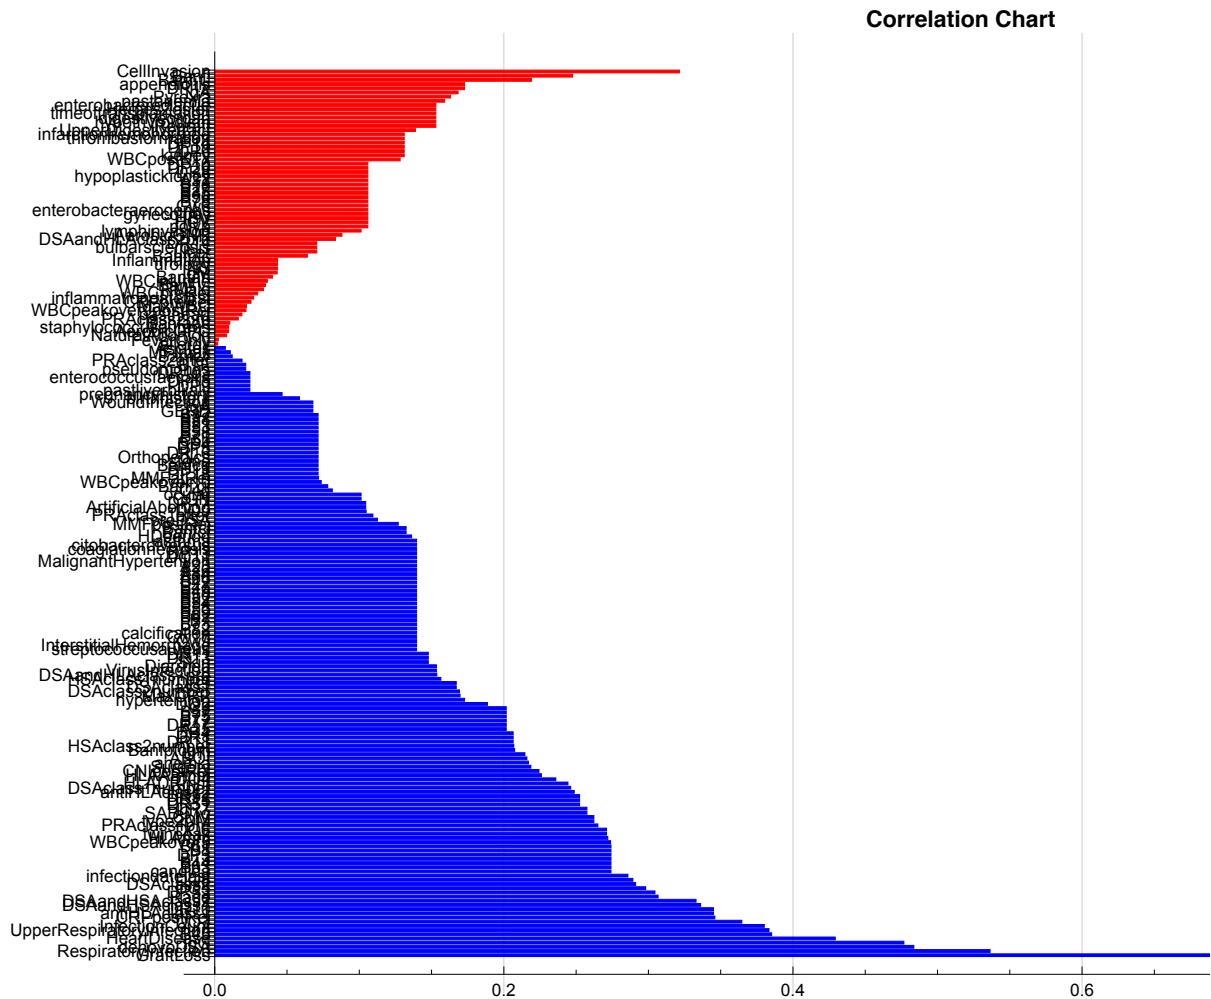

◊ This method is the same as K-fold cross-validation when the K is equal to the sample size. The number of test data is one, and the rest is used as the training data. Then the validation is repeated K times. The accuracy is figured out with the K results.

- Preliminary Analysis: Correlation Coefficient between Explanatory Variables and Target Variable

- ◆ 1. Correlation Chart of Data in the original order (BLUE: Positive correlation, RED: Negative correlation)

◆ 2. Correlation Chart of
Data in the correlation coefficient order
(BLUE: Positive correlation, RED: Negative correlation)

■ Setting HyperParameters in Leave-One-Out Cross Validation

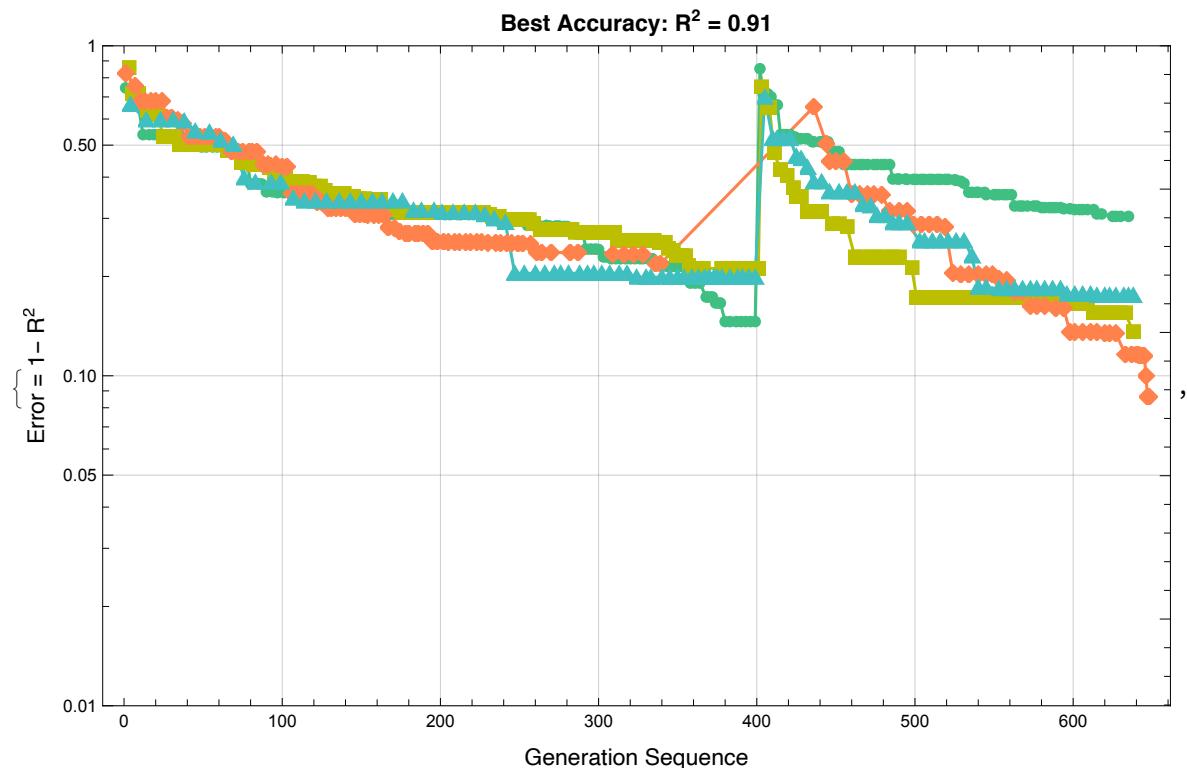

- ◆ The project name is PredictGraftLoss.
- Leave-One-Out cross validation starts.
- The Setting for Symbolic Regression
 - ◊ The time constraint is 3 min for one validation.
 - ◊ A number of independent evolutions per validation is 8.
 - ◊ Fitting index is 0.75`.
 - (Fitting index sets the initial QualityBox level, changing the tendency for overfitting or underfitting)
 - ◊ A total time of calculation per validation is {0, 24, 0}.

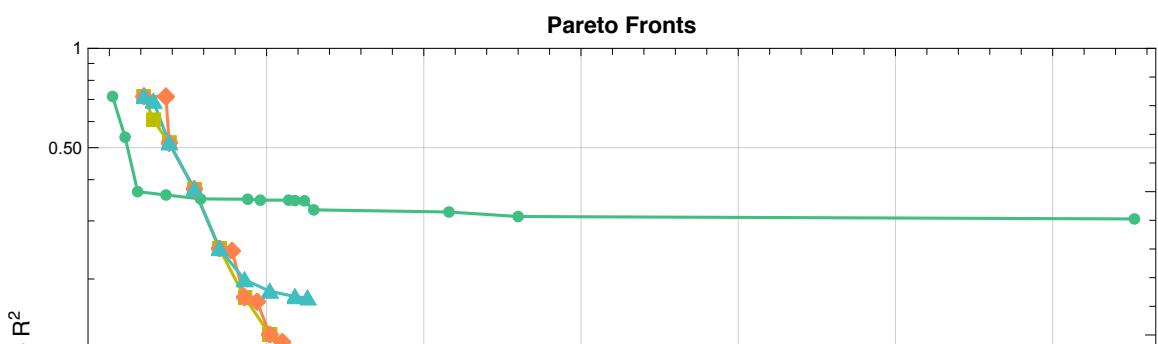

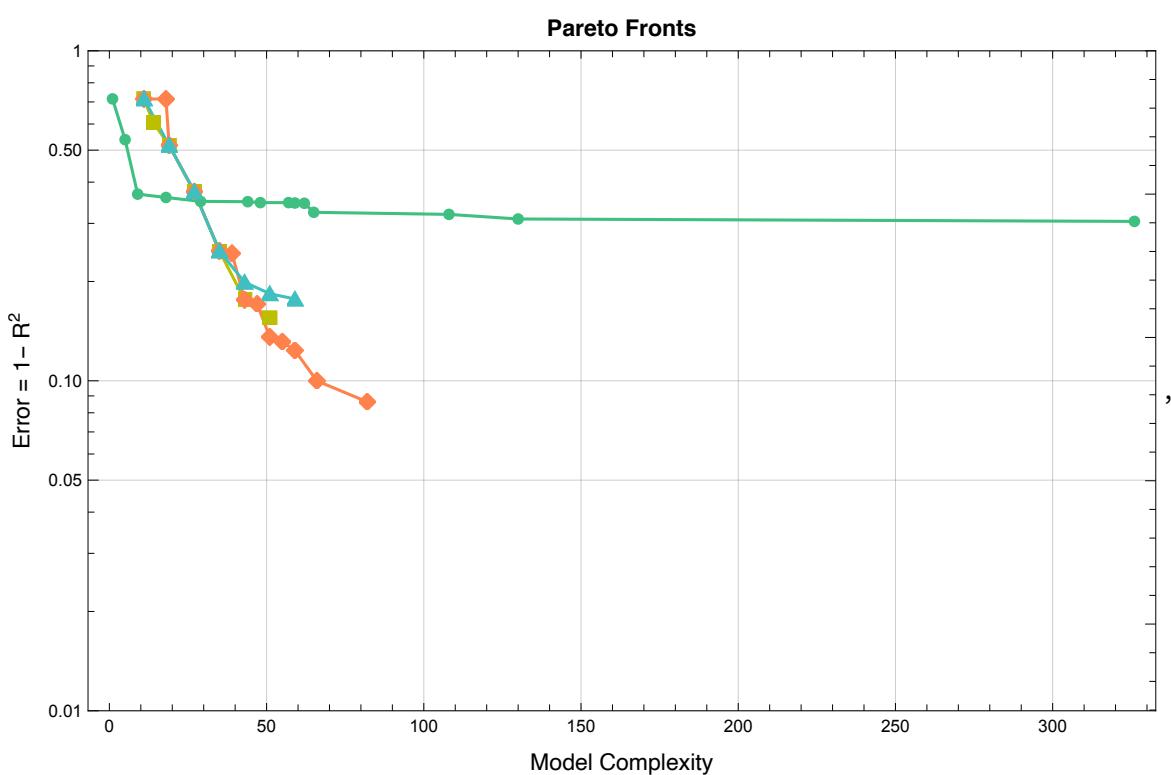

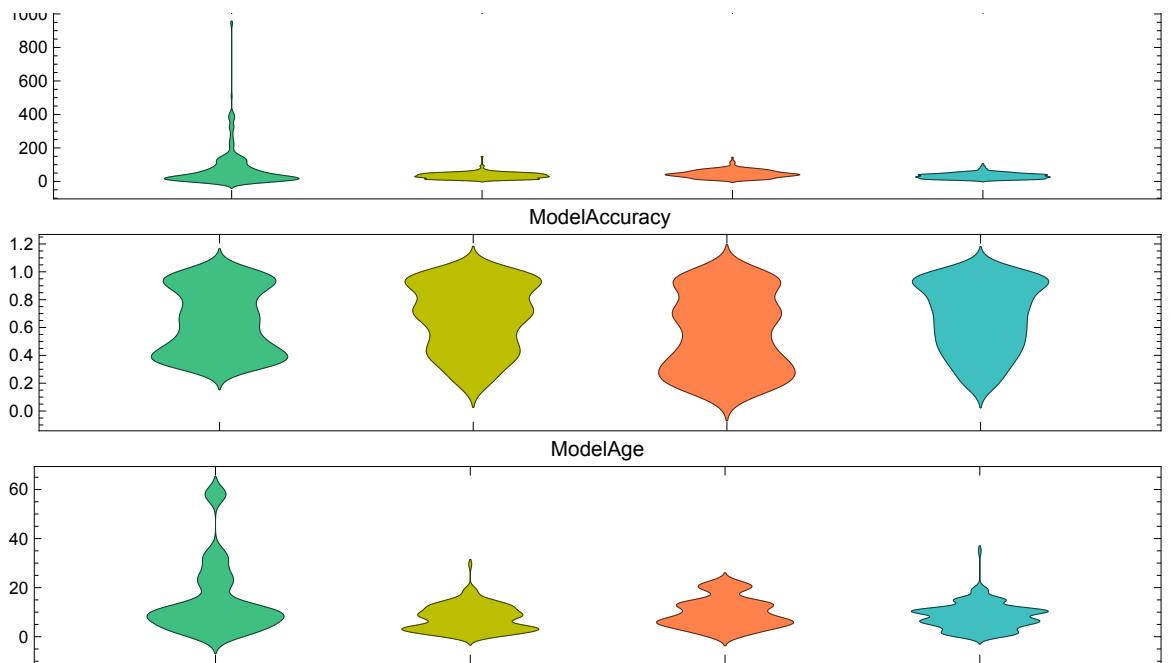

- ◊ A total time of calculation with 2 cores PC is {20, 24, 0}.
- ◆ Present Time : 2020年 7月 13日 20時 49分 46秒
- ◆ Finish Time with 8 cores PC : 2020年 7月 14日 1時 55分 46秒
- ◊ A total time of calculation using the PRESENT 8 cores PC is {5, 6, 0}.
- ◊ The DataSubsetSize: 100.%

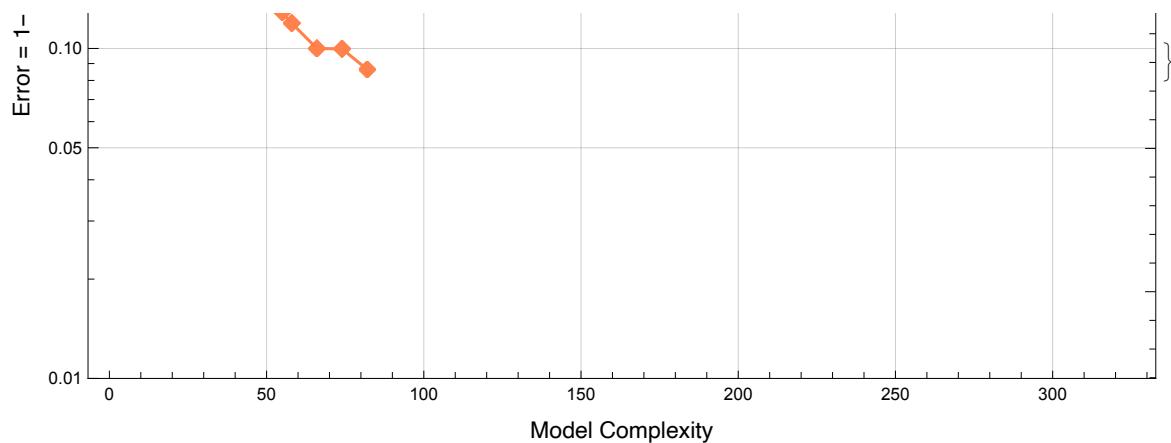

■ The 1st cross-validation out of 51 turns

- The 1st Genetic Programming has started.
- ◆ Present Time: 2020年 7月 13日 20時 49分 48秒
- The 1st Genetic Programming has ended.
- ◆ Present Time: 2020年 7月 13日 20時 56分 31秒

◆ Monitors Plot

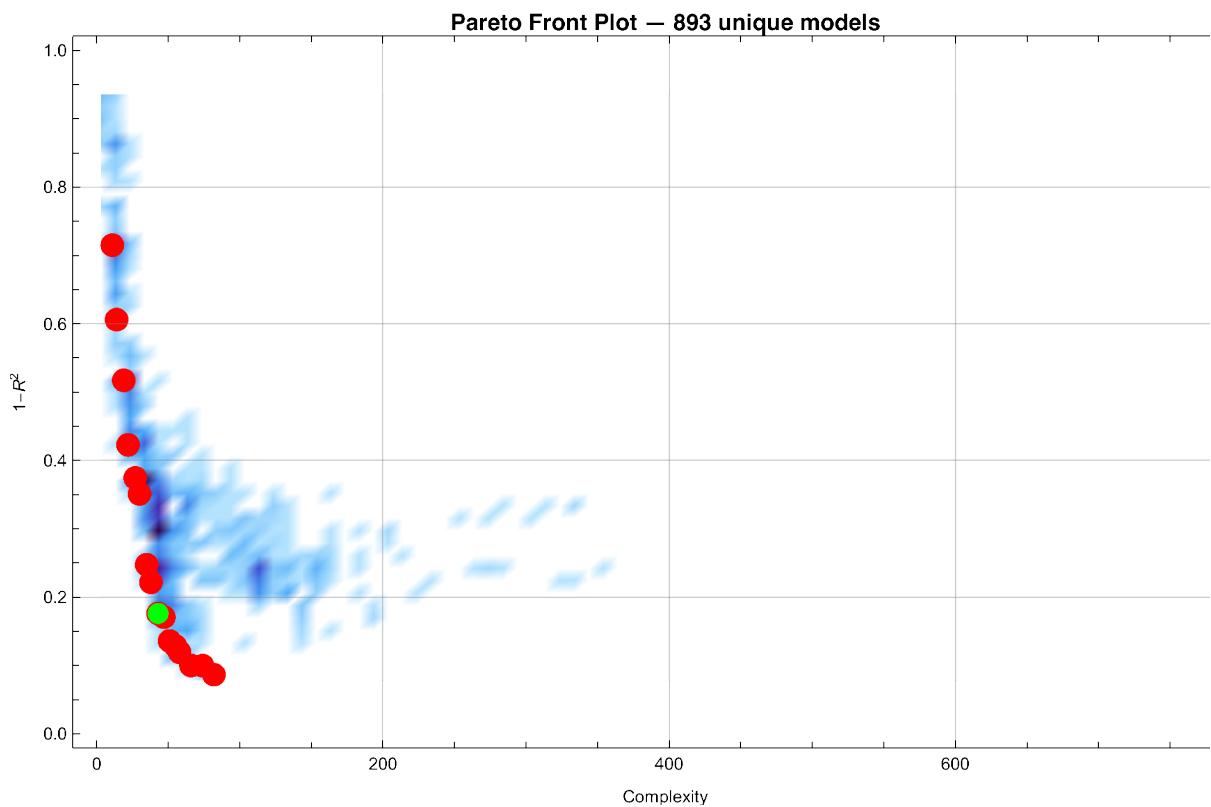

◆ **ParetoFront Plot**

◆ **A total of 893 models were created
with Symbolic Regression though machine learning**

◆ **Setting Quality Box values**

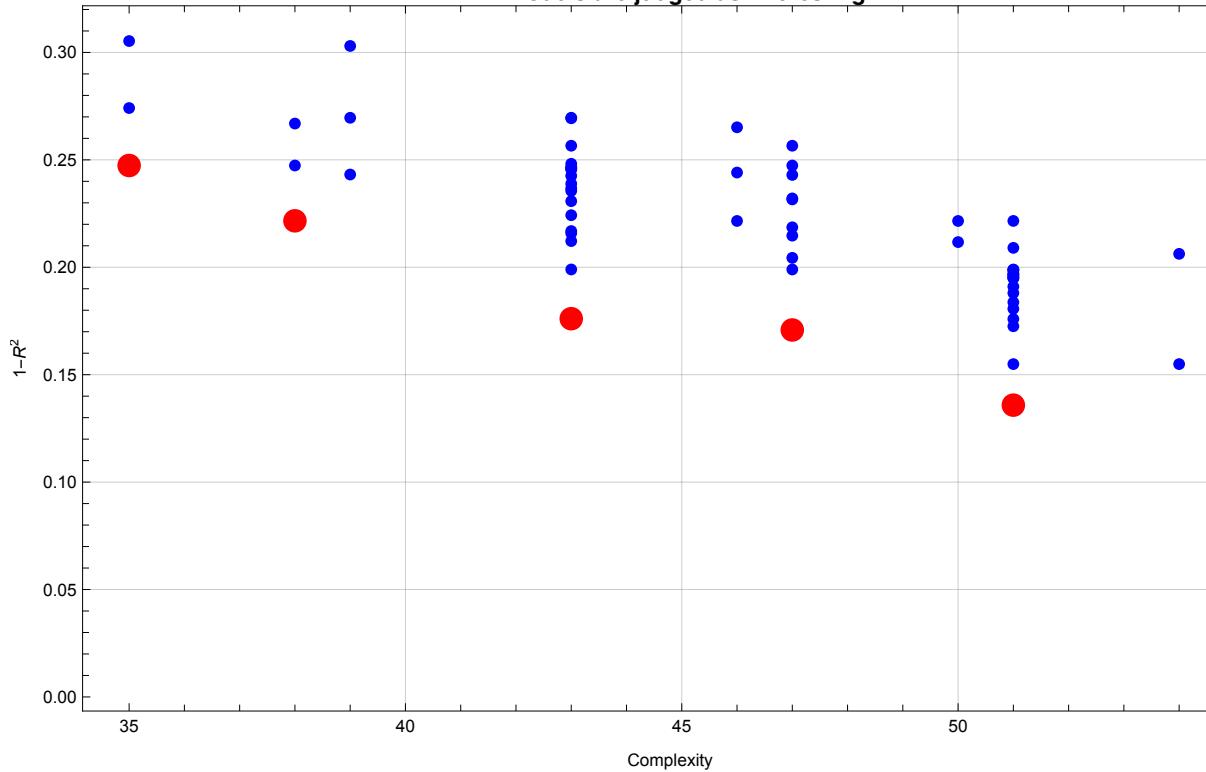

◆ **Quality Box values are {43., 0.1761} in the first turn.**

◆ **Limits of percents for
narrowing down models: Min 8%, Max 20%**

- Process for adjusting levels of Quality Box is initiated mainly to limit the selected models between 8.% and 20.% of all generated models.
